Use and maintenance manual

REFRIGERATED ROOM

RETARDER-PROOFER DOUGH-RETARDER

Thank you for choosing this product.

Please read the warnings contained in this manual carefully, as they provide important information regarding safe operation and maintenance.

Make sure to keep this manual for any future reference by the various operators.

In some parts of the manual, the symbol appears, indicating an important warning that must be observed for safety purposes.

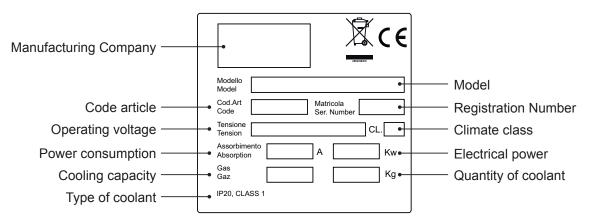

CHAPTER 1 BOUNDARY CHARACTERISTICS OF OPERATION

The retarder-proofer/dough-retarder Refrigerated Room have been designed and built to operate in optimal conditions at temperatures of up to +10°C and +38°C, with adequate air circulation. In places with characteristics that are different from the requirements, the stated performance cannot be guaranteed.

The supply voltage must be 400N/3Ph/50Hz as standard, or as indicated on the EC label.

The retarder-proofer/dough-retarder Refrigerated Room complies with the European directives as described in detail in the Annex "**EC Declaration of Conformity**".

The data are reported on the EC label placed in the retarder-proofer/dough-retarder Refrigerated Room, inside the engine compartment.

The manufacturer declines any liability for improper use of the retarder-proofer/dough-retarder Refrigerated Room as well as use that could not have been reasonably foreseen, and for all operations performed on it that disregard the instructions in the manual.

The main general safety standards are listed below:

- **Do not** use or place electrical devices inside the refrigerated compartments if they are not of the type recommended by the manufacturer

- Do not touch the the retarder-proofer/dough-retarder Refrigerated Room with damp or wet hands or feet

- **Do not**use the the retarder-proofer/dough-retarder Refrigerated Room barefoot

- **Do not** insert screwdrivers or other objects between the guards or moving parts

- **Do not** pull the power cord to unplug the the retarder-proofer/dough-retarder Refrigerated Room from the electricity network

- The retarder-proofer/dough-retarder Refrigerated Room are not intended to be used by persons (including children) with physical or mental problems, or lack of experience and knowledge, unless they are controlled or instructed in using the unit by a person responsible for their safety. Children must be supervised to ensure that they do not play with the appliance.

- before carrying out any cleaning or maintenance, disconnect the Refrigerated Room from the mains power supply by turning off the main switch and pulling the plug

- in the event of failure and/or malfunction of the the retarder-proofer/dough-retarder Refrigerated Room, turn it off and to refrain from any attempt to repair or intervene directly. It is necessary to exclusively contact a qualified technician.

The retarder-proofer/dough-retarder Refrigerated Room are composed of a modular panels coated with different materials and insulated with polyurethane foam of density 42 kg/m3.

In the design and construction, all measures have been adopted to ensure the retarder-proofer/ dough-retarder Refrigerated Room comply with safety and hygiene requirements, such as: rounded interior corners, deep drawing with drain on the outside for the condensate liquids, no rough surfaces, fixed guards on moving or dangerous parts.

The installation must be performed exclusively by a qualified technician

1.1 It is prohibited to remove the guards and safety devices

It is absolutely forbidden to remove safety guards.

The manufacturer disclaims any liability for accidents due to failure to comply with this obligation.

1.2 Information on emergency operations in the event of fire

- disconnect the retarder-proofer/dough-retarder Refrigerated Room from the electrical outlet or cut off the main power supply

- do not use water jets

- use dry chemical or CO2 extinguishers

CHAPTER 2 CLEANING

Since the retarder-proofer/dough-retarder Refrigerated Room will be used to store food, cleaning is necessary for hygiene and health protection purposes.

The cleaning of the retarder-proofer/dough-retarder Refrigerated Room have already been carried out at the factory. It is suggested, however, to carry out an additional cleaning of the internal parts before use, making sure that the power cord is unplugged.

2.1 Cleaning the interior and exterior room

For this purpose the following are indicated

- the cleaning products: water and mild, non-abrasive detergents. DO NOT USE SOLVENTS AND THINNERS

- methods for cleaning: wash the interior and exterior parts with warm water and mild soap or with a cloth or sponge with suitable products

- disinfection: avoid substances that can alter the organoleptic characteristics of the food

- rinsing: cloth or sponge soaked in warm water. DO NOT USE WATER JETS

- frequency: weekly is recommended, the user can set different frequencies depending on the type of food being stored.

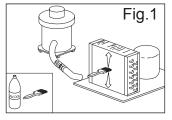

REMARK: Clean frequently the door seals.

Some preserved products could release some enzymes that could damage the seals causing its quick deterioration.

For the cleaning, use only specific products for this purposes, available also on request on our sales network.

2.2 Cleaning the condenser

The efficiency of the retarder-proofer/dough-retarder Refrigerated Room is compromised by the clogging of the condenser, therefore it is necessary to clean it on a monthly basis. Before carrying out this operation, switch off the retarder-proofer/dough-retarder Refrigerated Room unplug the power cord and proceed as follows:

With the aid of a jet of air or dry brush, eliminate, in a vertical movement (Fig. 1), the dust and lint deposited on the fins. In the case of greasy deposits, we recommend using a brush moistened with special cleaning agents. When the operation is completed, restart the retarder-proofer/dough-retarder

Refrigerated Room

During this operation, use the following personal protective equipment: goggles, respiratory protection mask, chemically resistant gloves (gasoline-alcohol).

CHAPTER 3 PERIODIC CHECKS TO BE CARRIED OUT

IMPORTANT: The following are the points or units of the retarder-proofer/dough-retarder Refrigerated Room that require periodic checks:

- integrity and efficiency of door seals
- integrity of the fixing hinges of the doors
- integrity of the power cord

3.1 PRECAUTIONS IN CASE OF LONG PERIODS OF INACTIVITY

A long period of inactivity is defined as a stoppage of more than 15 days.

It is necessary to proceed as follows:

- switch off the retarder-proofer/dough-retarder Refrigerated Room and disconnect it from the power supply - carry out a thorough cleaning of the interior Refrigerated Room, paying special attention to critical points such as the joints and magnetic gaskets, as indicated in Chapter 2.

- leave the door partly open to prevent air stagnation and residual humidity

CHAPTER 4 PREVENTIVE MAINTENANCE

4.1 Restarting after a long period of inactivity

Restarting after long inactivity is an event that requires preventive maintenance.

It is necessary to perform a thorough cleaning as described in chapter 2.

4.2 Control of the warning and control devices

We recommend that you contact your dealer for a service or maintenance contract that includes: - cleaning of the condenser

- verification of the coolant load
- verification of the full cycle operation
- electrical safety

CHAPTER 5 EXTRAORDINARY MAINTENANCE AND REPAIR

All maintenance activities that have not been described in previous chapters are considered "Extraordinary Maintenance." Extraordinary maintenance and repair are tasks reserved exclusively to the specialist personnel authorized by the manufacturer.

No liability is accepted for actions carried out by the user, by unauthorized personnel, or with the use of non-original replacement parts.

CHAPTER 6 TROUBLESHOOTING

Problems may occur, in the retarder-proofer/dough-retarder Refrigerated Room identified as shown in the table:

TROUBLE DESCRIPTION	POSSIBLE CAUSES	HOW TO REPAIR IT
the retarder-proofer/dough-retarder	no power supply	check the plug, socket, fuses, line
Refrigerated Room do not turn on	other	fuses, line
the refrigeration unit does not start	the set temperature has been reached	set new temperature
	defrosting in progress	wait until the end of cycle / turn power off and on again
	control panel failed	contact technical support
	other	contact technical support
the refrigeration unit runs conti-	location is too hot	aerate more
nuously but does not reach the set temperature	condenser is dirty	clean the condenser
	insufficient coolant	contact technical support
	stop the condenser fan	contact technical support
	insufficient sealing of doors	check the seals / provision of goods
	evaporator completely frosted	manual defrosting
	other	contact technical support
the refrigeration unit does not stop at	command panel failed	contact technical support
the set temperature	Pr1 temperature sensor failed	contact technical support
	misuse	see chapter 1.
block of ice on the evaporator	defrost heater fault	contact technical support
	defrost probe Pr2 damaged	contact technical support
accumulation of water or ice in the	drain clogged	clean the pipette and the drain
drip tray	Refrigerated Room are not levelled	check levelling

CHAPTER 7 INSTRUCTIONS FOR REQUESTING ASSISTANCE

For any technical problem, and any **requests for assistance or service**, you must exclusively **contact your own dealer** with the code and the registration number described on the label of technical data applied on the equipment

CHAPTER 8 SAFETY AND ACCIDENT PREVENTION

The retarder-proofer/dough-retarder Refrigerated Room have been built with suitable measures to ensure the safety and health of the user.

The following are the measures taken to protect against mechanical risks:

- **stability:** The retarder-proofer/dough-retarder Refrigerated Room , even with the grilles removed, have been designed and built in such a way that under the intended operating conditions, its stability is suitable for use without risk of overturning, falling or unexpected movement

- **surfaces**, **edges**, **corners**: the accessible parts of the retarder-proofer/dough-retarder Refrigerated Room are, within the limits allowed by their functions, free of sharp angles and sharp edges, as well as rough surfaces likely to cause injury

- **moving parts:** were designed, constructed and arranged to avoid risks. Certain parts are equipped with fixed guards so as to prevent risks of contact which may result in injury

The following are the measures taken to protect against other risks:

- **electricity:** The the retarder-proofer/dough-retarder Refrigerated Room have been designed, built and equipped so as to prevent risks from electricity, in accordance with the specific legislation in force

- **noise:** The retarder-proofer/dough-retarder Refrigerated Room have been designed and built in such a way that risks resulting from the emission of airborne noise are reduced to the minimum level

8.1 safety devices adopted

It is absolutely forbidden:

- to tamper with or remove the closing panels of the monocondensing unit

- remove the labels applied describing the technical characteristics (1) and the warnings for grounding of the Refrigerated Room

- remove the labels applied describing the technical characteristics and the warnings for grounding of the motocondensing unit

- remove the label of Refrigerated Room which warns the user to turn off the power supply before working on the unit

- remove the label of the remote motocondensing unit which warns the user to turn off the power supply before working on the unit

- to remove the labels applied on the Refrigerated Room indicating grounding

- to remove the labels applied on the remote motocondensing unit indicating grounding

- to remove the label applied on the power cord, indicating the type of power supply (2)

The manufacturer declines any responsibility for the safety of the Refrigerated Room if this were to happen.

8.2 Indications for optimal operation

- do not block the air vents of the remote motocondensing unit

- place the foodstuffs on the appropriate shelves or containers. Do not place them directly on the bottom, or leaning against the walls, doors or fixed guards

- close the doors carefully

- always keep the defrost water drain hole clear of obstructions

- limit, to the extent possible, the frequency and duration of door opening. Each opening causes a change in the internal temperature

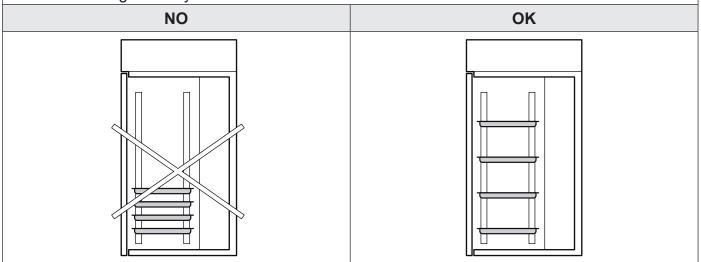

- perform periodically current maintenance (see chapter 3)

Avoid overloading the Refrigerated Room beyon	d the set limits shown in the table
NO	ОК
	- <u>ADADA</u> F

Do not place the trays too close to each other so as to avoid uneven air circulation inside the Refrigerated Room

NO	ОК

Do not concentrate the trays in one area of the Refrigerated Room in case the load is not complete; distribute its height evenly

In case of interruption or failure of the power supply circuit, prevent the opening of the doors in order to maintain a uniform temperature inside the Refrigerated Room. If the problem persists longer than a few hours it is recommended to move the material to a suitable place.

USEFUL SUGGESTIONS

Before starting a RETARDER-PROOFING cycle it is advisable to pre-cool the empty cell at -5 ° C, thus allowing more effective action of the Retarder-proofing action during the introduction of the product (see par.10.6 page 30)

For cycles longer than 48 H increase yeast of 0.5% speeding as possible the loading phase of the product.

Do not bake the product once it has been taken out from the retarder proofer, leave at least 10 minutes at room temperature in order to avoid an excess of moisture in the surface that could cause defects in the crust formation during cooking.

The possible bubbles formation on the bread is not synonymous of failure in the system, the cause is almost always due to a problem of bread: dough too soft, too cold, low-quality flour, too much moisture in the leavening phase, the oven is too hot, excess of cooking steam, etc

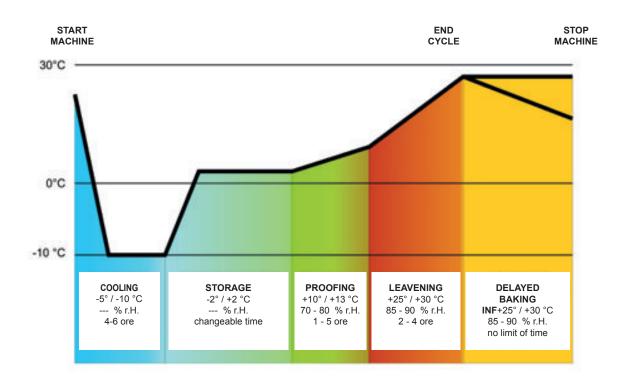

Avoid too high temperatures along with too short times during LEAVENING and PROVING, thermal shock should cause problems to gluten and yeast damaging the quality of the finished product.

In the case of products that require periods of storage longer than 72H is advisable to use special temperature blast chiller (see our catalogues) designed to bring the inside part of bread in the shortest time to a temperature of -20° C thus allowing to keep the original organoleptic quality comparing it to the fresh product.

Even the storage phase must take place in a special cold room who keeps constantly t -20° C.

PRELIMINARY NOTES

The control panel provides full control for retarder-proofer Refrigerated Room for confectionery and bakery, through the automatic management of the complete retarder-proofing cycle Example

An automatic retarded proofing process consists of 5 steps providing different temperatures, relative humidity, fans speed and different duration which are carried out in sequence as follows:

3 1. COOLING Phase

The block phase is the first phase of the automatic cycle.

- Temperature adjustment : ACTIVE AND ADJUSTABLE
- Duration (Hours/Minutes): ADJUSTABLE
- ► Fan speed : AUTOMATIC

(B) 2. PRESERVATION Phase

The preservation phase is the second phase of the automatic cycle.

- ► Temperature adjustement: ACTIVE AND ADJUSTABLE
- ► Duration : (Hours-Minutes): AUTOMATIC
- ► Fan speed : AUTOMATIC

The duration of this phase is automatically calculated by the controller on the basis of the duration of the cooling, the proofing and the leavening processes as well as the day and the time the end of the dough leavening process is required to stop.

3. PROOFING Phase

The proofing phase is the third phase of the automatic cycle.

- ► Temperature adjustement : ACTIVE AND ADJUSTABLE
- Humidity Adjustment : ACTIVE AND ADJUSTABLE
- Duration (Hours-Minutes): ADJUSTABLE
- Fan speed : AUTOMATIC

3 4. LEAVENING Phase

The leavening phase is the fourth phase of the automatic cycle.

- ► Temperature adjustement : ACTIVE AND ADJUSTABLE
- Humidity adjustment : ACTIVE AND ADJUSTABLE
- Duration (Hours-Minutes): ADJUSTABLE
- Fan speed : AUTOMATIC

5. DELAYED BAKING Phase

The delayed baking phase is the fifth phase of the automatic cycle.

The delayed baking phase may be either enabled or disabled both during the cycle setting and also during a processing cycle by the final user.

- Temperature adjustment :ACTIVE AND ADJUSTABLE
- Humidity adjustement : ACTIVE AND ADJUSTABLE
- ► Fan speed : AUTOMATIC

► Duration (Hours-Minutes): The duration of this phase is virtually infinite , that is : it only stops when you interrupt the cycle by pressing the stop button for 3 seconds.

MANUAL CYCLES

B MANUAL COOLING PROCESS : (equivalent to storage but with infinite duration) B HEATING MANUAL PROCESS : (equivalent to a never-ending leavening process)

Besides the automatic and manual cycles management, the controller also provides you to control other functions such as :

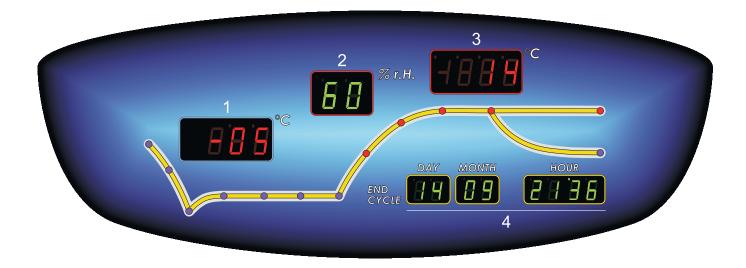

- Cell pre-cooling management system
- "Delayed baking" activation/deactivation management system
- 10 User's Programmes management
- 10 Favourite Programmes management
- Connection to RICS (remote management supervisory control) and RS485

- Onboard USB Host port management for PROGRAMMES download/upload, PARAMETERS download/upload and HACCP data download.

CHAPTER 9 CONTROLS

Synoptic control panel description:

The Synoptic control panel display states in which the Refrigerated Room is located, in the various phases of the cycle, through a graph with signs flashing LED.

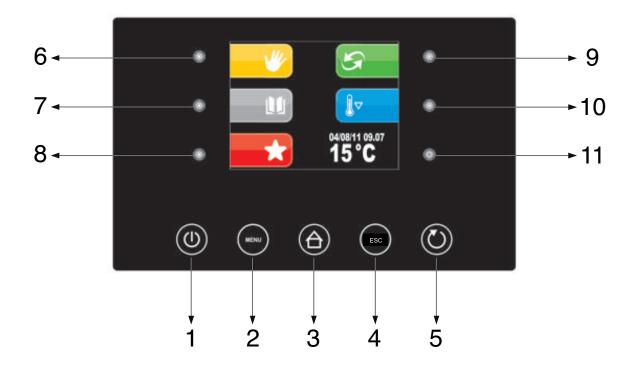

Additionally, it displays the following information:

1 8 8 5 °C	 Cold room temperature during: Refrigeration (manual cycle) Leavening interruption (automatic cycle) Storage (automatic cycle)
2 60 % r.H.	Relative humidity in the cold room
з С. 1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1	Cold room temperature during: Heating (manual cycle) Conditioning (manual cycle) Arousal (automatic cycle) Leavening (automatic cycle) Slowing down (automatic cycle)
4 HOUR HOUR	 Actual day, month and time with board in stand-by mode or manual cycle in progress Actual day, month and time end cycle with automatic cycle in progress

CHAPTER 9.1 CONTROLS Description of control Panel:

The Control Panel consists of a digital capacitive-type temperature controller for coldness with colour 3,5" TFT supplied with user-friendly icons:

The Control Panel is supplied with the following buttons:

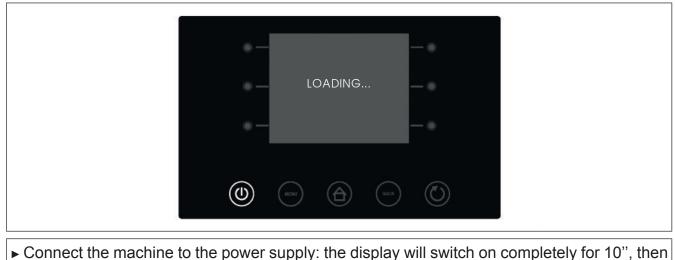

1	ON / OFF It allows to change the controller's status
2 (MENU)	MENU It allows to open the pop-up window containing the options for the current screen
3	HOME It allows to go back to the pre-selection screen at any time, cancelling any pro- cessing selected programme.
4 (ESC)	ESC It allows to go back to the previous page at any time, cancelling any processing selected programme.
50	START / STOP It allows to start/stop a working cycle, either manual or automatic or auxiliary.
6	MANUAL KEY It allows to select a MANUAL working cycle
7	PROGRAMMES KEY It allows to select and/or change automatic retarded proofing processes stored in memory.
8	FAVOURITE KEY It allows to recall the last 10 cycles performed promptly.
9 🔄	AUTOMATIC KEY It allows the selection, the setting and the implementation of a complete automatic retarded proofing process.
10	PRE-COOLING KEY It allows the implementation of a cell pre-cooling cycle.
11 🔘	INTERACTIVE SELECTION KEY It allows to select the menu options

Active keys are the backlit keys only.

9.2 INSTRUCTIONS FOR USE

9.2.1 Starting process

Before starting the Retarder-Proofer Refrigerated Room you need to check if the electrical connections have been made according to what stated in Chapter 14.

it shall be on the "STAND-BY" status.

Starting / switching-off : Start the panel by pressing the ON/OFF touch button (1)

▶ If the power cut has caused clock error , the display will directly show the clock setting screen.

PLEASE NOTE: the control panel shall not verify whether the inserted date is correct, it is up to the user to set it properly. (Par. 9.2.2)

▶ While the machine is ON, the display will show the date, the present time, the cell temperature and all the functions which may be selected.

⁻ Press the ON / OFF key (1) to switch off.

9.2.2 Clock setting: set date and present time

The first operation to be carried out is setting the clock to the present time as follows:

► Press the MENU key (2) ,	$ \begin{array}{c} $
Select with the UP-DOWN keys (9-10) the menu date and time options then confirm by pressing the SET key (11)	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
Press the - and + keys (8-11) to adjust the date then confirm by pressing the SET key (9)	6 ● — — 9
	$\begin{array}{c} & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & &$

▶ When the operation is completed either press the ESC key (4) or do not work for 60 seconds.

3 9.2.3 Language setting

Proceed as follows:

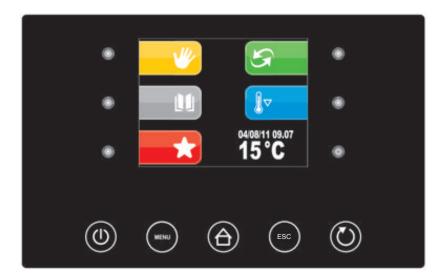

Press the MENU key (2),	$ \begin{array}{c} $
► Select with the UP-DOWN keys (9-10) the menu SERVICE item and press the SET key (11)	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
► Select with the UP-DOWN keys (9-10) the menu LANGUAGES item then press the SET key (11)	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
 Select with UP-DOWN keys (9-10) the desired LANGUAGE Press the SET key (11) to confirm WARNING : should you need to change language, all the new programmes stored in a different language will be cancelled while the default programmes will be brought back to the default values. 	$ \begin{array}{c} 6 \bullet - & \overset{\text{SERVICE}}{1} & - \bullet & 9 \\ & \overset{\text{ITALIANO}}{1} & \overset{\text{ENGLISH}}{1} & & & & & & \\ 7 \bullet - & \overset{\text{ENGLISH}}{1} & & & & & & & \\ 7 \bullet - & \overset{\text{ENGLISH}}{1} & & & & & & & & \\ 8 \bullet - & \overset{\text{SET}}{1} & - \bullet & 11 \\ \end{array} $ $ \begin{array}{c} 1 & 2 & 3 & 4 & 5 \\ & & & & & & & \\ \end{array} $

▶ When the operation is completed either press the ESC button (4) or do not work for 60 seconds.

CHAPTER 10 OPERATION

Main menu

In the pre-setting page there is the list of the available functions as well as the following data: date, time and cell internal temperature.

The 5 "interactive" keys allow you to select:

MANUAL CYCLES: : i.e. the selection, the setting-up and the implementation of a manual cooling or heating cycle.

STORED PROGRAMMES : i.e. the selection and/or the adjustement of automatic retarded proofing processes stored in memory.

FAVOURITE PROGRAMS : i.e. the prompt recalling of the last 10 performed cycles

AUTOMATICI CYCLES : i.e. the selection, the setting-up and the implementation of a complete automatic retarded proofing process.

CELL PRE-COOLING PROGRAMME: i.e. The implementation of the cell pre-cooling cycle.

The 5 "Navigate" keys allow you to scroll to the desired menu and to activate the different working cycles:

ON/OFF
 MENU
 HOME
 ESC
 START/STOP

∣∬⊽

$\textcircled{\sc B}$ 10.1 Setting-up and implementation of a MANUAL COOLING or HEATING cycle

From this menu you may select all the phases needed to carry out a manual **COOLING or HEATING** cycle.

10.2 Setting up and running a cycle REFRIGERATION MANUAL:

► Press key MANUAL (6)	
► Press one of the three left keys (6-7-8) to select the MANUAL COOLING cycle	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
 Press the - and + keys (8-11) to adjust the CO- OLING temperature Press the START/STOP key (5) to start the MA- NUAL COOLING cycle PLEASE NOTE: The fans speed adjustment fun- ction is disabled as it is automatically set. 	$6 \circ - 12 \circ C \uparrow - 9$ $7 \circ - 100\% \downarrow - 010$ $8 \circ + - 011$ $1 2 3 4 5$ $100\% 0 0 0 0$

► Once the MANUAL COOLING cycle is working, the following screen shall be displayed: **6** ● − Refrigeration 14 • 9 • 10 7 •-12 °C 8 • 11 5 () 1 3 2 $(\widehat{\mathbf{A}})$

You may view the following list of OPTIONS by pressing the MENU key (2) during a MANUAL COOLING cycle:

- SETPOINT
- ALARMS LIST
- INTERNAL VALUES
- MANUAL DEFROSTING (not to be carried out if not necessary)

► To modify the defined SETPOINT during a wor- king MANUAL COOLING cycle, press the MENU key (2), select with the UP-DOWN keys (9-10) the SETPOINT function and press the SET key (11)	$\begin{array}{c} 6 & \bullet & \bullet & \bullet \\ \hline & \bullet \\ \hline & \bullet & \bullet \\$
 To modify the defined SETPOINT press the - and + keys (8-11) When the operation is over either press the ESC button (4) to go back to the OPTIONS menu or do not operate for 60 seconds. PLEASE NOTE: The fans speed adjustment fun- ction is disabled as it is automatically set. 	$6 \circ - 12 \circ C \uparrow - \circ 9$ $7 \circ - 100\% \downarrow - \circ 10$ $8 \circ + - \circ 11$ $1 2 3 4 5$ $0 \circ - 10$ $1 \circ - 0 \circ - 0$

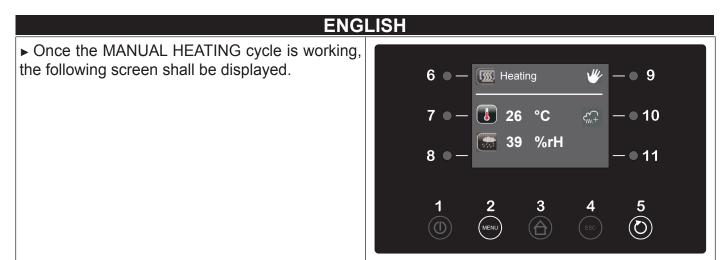

ENG	LISH
 To display the ALARMS LIST during a working MANUAL COOLING cycle, press the MENU key (2) Select with the UP-DOWN keys (9-10) the ALARMS LIST item and press the SET key (11) 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 The screen will display the current alarms list Press the UP-DOWN keys (9-10) to scroll through the alarms, if the alarm is ON it is active, if it is OFF it is not active. When the operation is over either press the ESC key (4) to go back to the OPTIONS menu or do not work for 60 seconds. 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 To view the INTERNAL VALUES during a working MANUAL COOLING cycle press the MENU key (2) Press the UP-DOWN keys (9-10) to select the INTERNAL VALUES then press the SET key (11) 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 The screen will display the INTERNAL VALUES list. Press the UP-DOWN keys (9-10) to scroll through the INTERNAL VALUES When the operation is over either press the ESC key (4) to go back to the OPTIONS menu or do not work for 60 seconds. 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$

PLEASE NOTE: The MANUAL DEFROSTING menu is activated only if the evaporator temperature is lower than the final defrost end temperature. To cancel the MANUAL COOLING cycle hold the START/STOP button (5) pressed for more

than 5 seconds. The display will go back to the Home screen.

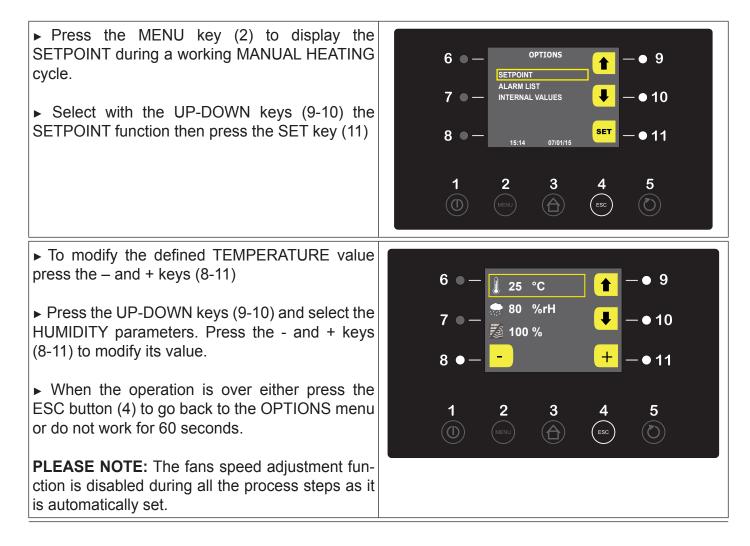

The setting-up and implementation of a MANUAL HEATING cycle:

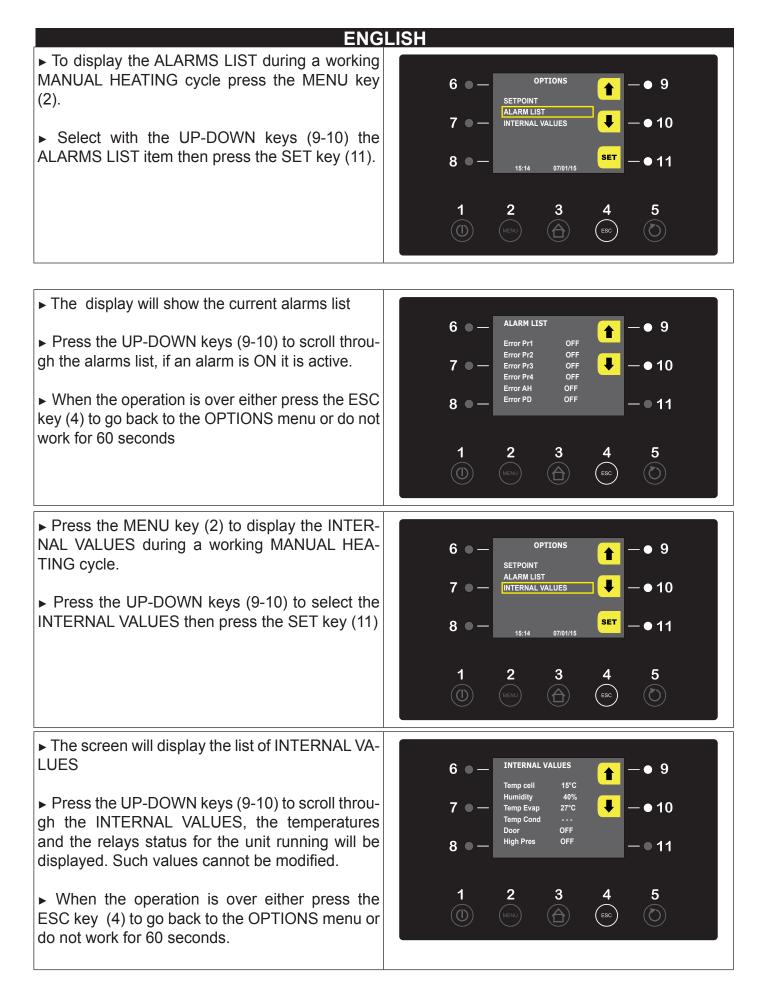

► Press Key MANUAL (6)	
► Press one of the three right keys (9-10-11) to select a MANUAL HEATING cycle	$ \begin{array}{c} 6 & \bullet \\ 7 & \bullet \\ 7 & \bullet \\ 8 & \bullet \\ \end{array} $ $ \begin{array}{c} - & \bullet & 9 \\ - & \bullet & 10 \\ - & \bullet & 11 \\ \end{array} $ $ \begin{array}{c} 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 $
 Press the UP-DOWN keys (9-10) and select the TEMPERATURE parameters. Press the - and + keys (8-11) to modify its value Press the UP-DOWN keys (9-10) and select the HUMIDITY parameters . Press the - and + keys (8-11) to modify its value Press the START/STOP key (5) to start a MA-NUAL HEATING cycle 	$6 \circ - 25 \circ C \qquad \uparrow - \circ 9$ $7 \circ - 80 \% rH \qquad - \circ 10$ $8 \circ + - \circ 11$ $1 \qquad 2 \qquad 3 \qquad 4 \qquad 5$ $(1) \qquad (1) \qquad (1) \qquad (2) \qquad$
PLEASE NOTE: The fans speed adjustment function is disabled as it is automatically set.	

➤ You may view the following list of OPTIONS by pressing the MENU key (2) during a MANUAL HEATING cycle:

- SETPOINT
- ALARMS LIST
- INTERNAL VALUES

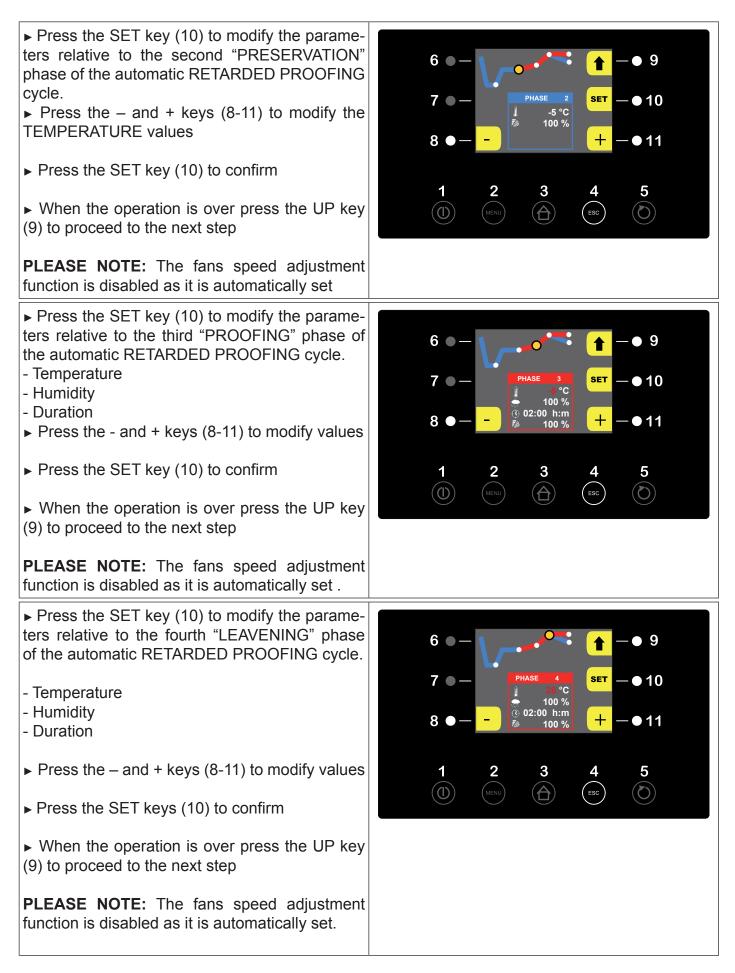

To cancel a MANUAL HEATING cycle hold the START/STOP button (5) pressed for more than 5 seconds. The display will go back to the Home screen.

$\textcircled{\sc B}$ 10.4 Setting-up and implementation of an AUTOMATIC cycle :

The selection of the AUTOMATIC menu allows you to set up a complete retarded proofing process.

► Press key AUTOMATIC (9)	 ● ● ● ●
► Press key 8 to set up the AUTOMATIC starting cycle parameters.	$ \begin{array}{c} 6 \bullet - \underbrace{END TIME CYCLE}_{DATE END CYCLE} & \underbrace{DB(01,01)}_{THU} & - \bullet & 9 \\ 7 \bullet - & & & & \\ 7 \bullet - & & & \\ 7 \bullet - & & & \\ 7 \bullet - & & & \\ 1 \bullet & & \\ 1 & 2 & 3 & 4 & 5 \\ \hline 1 & & & \\ 1 & $
 Press the SET key (10) to modify the parameters relative to the first "BLOCK" phase of the automatic RETARDED PROOFING CYCLE. Temperature Duration PLEASE NOTE: The fans speed adjustment function is disabled as it is automatically set. 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$

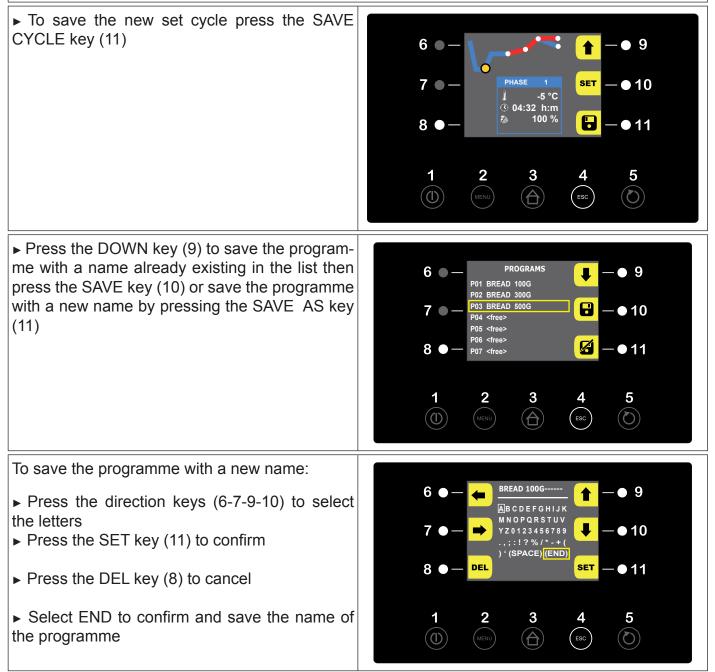

PLEASE NOTE : to skip one or more single step you should set its duration at 00:00 h:m

► Press the SET key (10) to modify the parameters relative to the fifth "DELAYED BAKING" phase of the automatic RETARDED PROOFING cycle.

- Baking
- Temperature
- Humidity
- ▶ Press the and + keys (8-11) to modify values
- Press the SET button (10) to confirm

PLEASE NOTE: The fans speed adjustment function is disabled as it is automatically set.

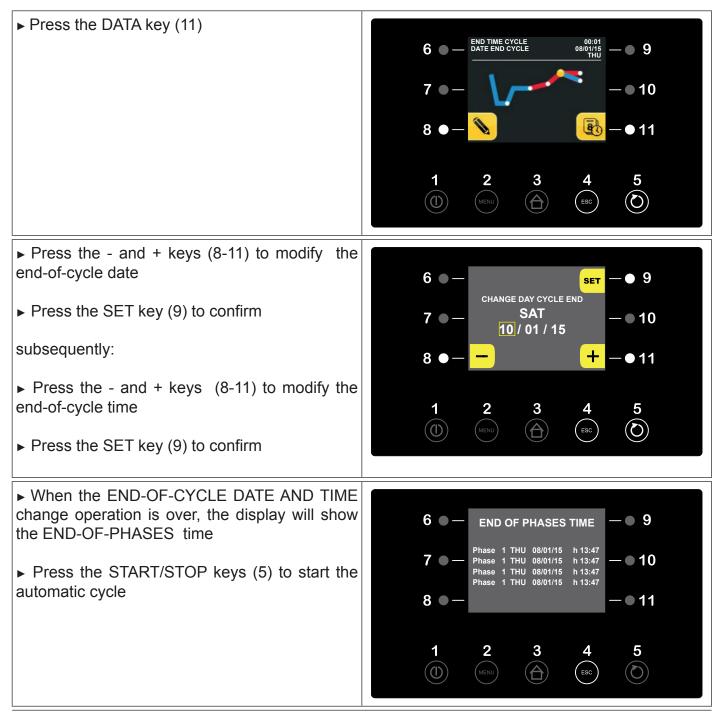

► When all the programming phases of the AUTOMATIC CYCLE have been completed, press the UP key (9) to review the set values of the different cycle steps.

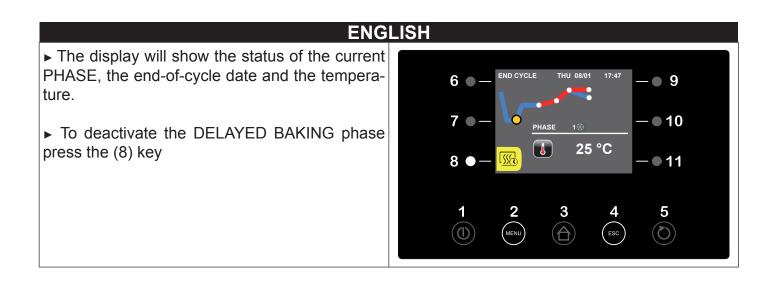

Each recalled cycle always suggests the first possible end-of-cycle date and time (resulting from the sum of the single phases) .

To modify THE END-OF-CYCLE DATE AND TIME proceed as follows:

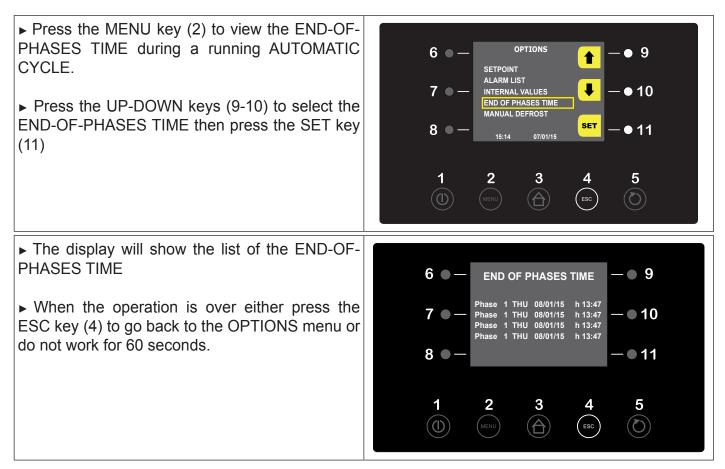

During the implementation of an AUTOMATIC CYCLE press the MENU key (2) to view the following options:

- SETPOINT
- ALARMS LIST
- INTERNAL VALUES
- END-OF-PHASE TIME
- MANUAL DEFROSTING

Press the MENU key (2) to modify the SETPOINT during a working AUTOMATIC CYCLE and select with the UP-DOWN keys (9- 10) the SETPOINT item then press the SET key (11) Any change will be effected on the current phase SETPOINT only.	$\begin{array}{c} 6 & \bullet & \bullet & \bullet \\ \hline & \bullet \\ \hline & \bullet & \bullet \\ \hline & \bullet & \bullet \\ \hline & \bullet \\$
 Press the – and + keys (8-11) to modify the defined SETPOINT When the operation is over either press the ESC key (4) to go back to the OPTIONS menu or do not work for 60 seconds. PLEASE NOTE: The fans speed adjustment function is disabled as it is automatically set. 	$6 \circ - 12 \circ C \uparrow - 9$ $7 \circ - 100\% \downarrow - 010$ $8 \circ + - 011$ $1 2 3 4 5$ $(1) 0 0\% + 5$ $(2) 0 0 0$

ENG	LISH
 Press the MENU key (2) to view the ALARMS LIST during a working AUTOMATIC CYCLE. Select with the UP-DOWN keys (9-10) the ALARMS LIST item then press the SET key (11) 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
 The display will show the alarms list (active alarms are identified with ON) Press the UP-DOWN keys (9-10) to scroll through the alarms When the operation is over either press the ESC key (4) to go back to the OPTIONS menu or do not work for 60 seconds. 	6 - ALARM LIST - - 9 Error Pr1 OFF OFF - • 9 7 - Error Pr2 OFF - • 10 7 - Error Pr3 OFF - • 10 8 - Error PD OFF - • 11
 Press the MENU key (2) to display the INTER- NAL VALUES during a running AUTOMATIC CYCLE Press the UP-DOWN keys (9-10) to select the INTERNAL VALUES then press the SET key (11) 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 The display will show the list of the INTERNAL VALUES Press the UP-DOWN keys (9-10) to scroll down the INTERNAL VALUES When the operation is over either press the ESC key (4) to go back to the OPTIONS menu or do not work for 60 seconds. 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$

To cancel the AUTOMATIC cycle hold the START/STOP button (5) pressed for more than 5 seconds. The display will go back to the Home screen.

3 10.5 PROGRAMS:

The PROGRAMS menu allows you to select a retarded proofing cycle among the 10 available programme locations.

I	
► Press key PROGRAMS (7)	$ \begin{array}{c} $
 Press the UP-DOWN keys (9-10) to scroll down the list Press the SET key (11) to select the desired program. 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 Press the START/STOP key (5) to start the selected program or Press the CHANGE VALUES key (8) to modify the SETs of the different phases (see Par. 10.4 page 21) Press the DATE key (11) to modify the DATE and the TIME suggested by the program (the first possible one is always displayed) see Par. 10.4 page 21 	$ \begin{array}{c} 6 \bullet - & \stackrel{\text{END TIME CYCLE}}{\text{DATE END CYCLE}} & \stackrel{00:01}{\text{THU}} - \bullet & 9 \\ 7 \bullet - & \stackrel{1}{\text{THU}} - \bullet & 10 \\ 8 \bullet - & \stackrel{1}{\text{EC}} - \bullet & 11 \\ 1 & 2 & 3 & 4 & 5 \\ \hline 0 & \stackrel{1}{\text{MEV}} & \stackrel{2}{\text{O}} & \stackrel{3}{\text{ESC}} & \stackrel{5}{\text{O}} \end{array} $
 The display will show the current status of the running PHASE , the current end-of-cycle date and the temperature. Press the (8) key to deactivate the DELAYED BAKING phase The same options of the AUTOMATIC CYCLE will be available by pressing the MENU key (2) during the running of a PROGRAM (Chapter10.4 page 21) 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$

Retarded proofing process already stored

As an example it has been stored 3 programs : Bread 100 gr., Bread 300 gr., Bread 500 gr.

P01 - Bread 100 gr.					
	PHASE 1	PHASE 2	PHASE 3	PHASE 4	PHASE 5
	COOLING	STORAGE	PROOFING	LEAVENING	DELAYED BAKING
Temperature	-5	2	16	28	22
Humidity	NOT ACTIVATED	NOT ACTIVATED	80%	80%	75%
Time	03:30 (hh:mm)	AUTOMATIC	03:00 (hh:mm)	2:00 (hh:mm)	INFINITE
Fan speed	100%	100%	100%	100%	100%

P02 - Bread 300 gr.					
	PHASE 1 PHASE 2 PHASE 3 PHASE 4		PHASE 5		
	COOLING	STORAGE	PROOFING	LEAVENING	DELAYED BAKING
Temperature	-5	0	16	28	22
Humidity	NOT ACTIVATED	NOT ACTIVATED	80%	80%	75%
Time	04:00 (hh:mm)	AUTOMATIC	03:30 (hh:mm)	02:30 (hh:mm)	INFINITE
Fan speed	100%	100%	100%	100%	100%

P03 - Bread 500 gr.					
	PHASE 1	PHASE 2	PHASE 3	PHASE 4	PHASE 5
	COOLING	STORAGE	PROOFING	LEAVENING	DELAYED BAKING
Temperature	-6	-2	16	28	22
Humidity	NOT ACTIVATED	NOT ACTIVATED	80%	80%	75%
Time	04:30 (hh:mm)	AUTOMATIC	04:00 (hh:mm)	03:00 (hh:mm)	INFINITE
Fan speed	100%	100%	100%	100%	100%

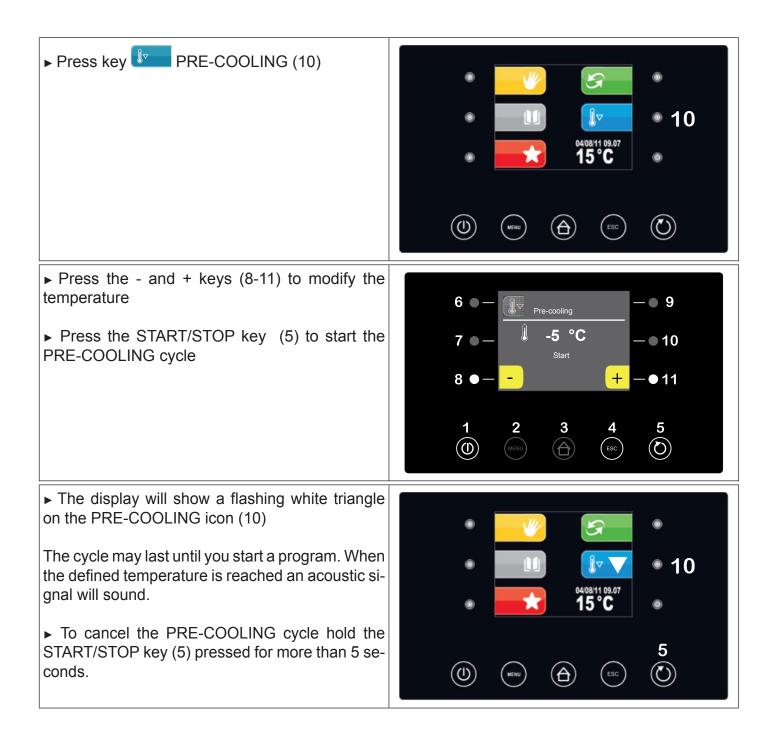

The remaining 7 positions, on 10 available are personalised directly by the customer himself.

To.6 PRE-COOLING CYCLE:

The purpose of the pre-cooling cycle is to lead the cell to a defined temperature before selecting and starting a retarded proofing cycle.

Once the pre-cooling temperature is reached, the buzzer sounds in an intermittent manner indicating that the machine is ready to perform a cycle.

The pre-cooling cycle goes on running until the START/STOP key is pressed or up to the starting of an automatic or manual cycle.

TOLES : 10.7 FAVOURITE RUNNING CYCLES :

This menu allows you to recall the favourite running cycles promptly, i.e. the last 10 implemented cycles.

► Press key FAVOURITES (8)	
 Press the UP-DOWN keys (9-10) to scroll down the list of favourite programs Press the SET key (5) to select a favourite program 	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$
 Press the START/STOP key (5) to start the selected program. If necessary, press the CHANGE VALUES key (8) to modify the SETs of the different phases (see Par. 10.4 page 21) If necessary, press the DATA key (11) to change the DATE and the TIME suggested by the program (the first possible one is always displayed) Par. 10.4 page 21 The management of the cycle will be the same as the setting of an automatic cycle 	$6 - \stackrel{\text{END TIME CYCLE}}{\text{DATE END CYCLE}} \stackrel{00:01}{\text{THU}} - 9$ $7 - 10$ $8 - \bigcirc \bigcirc - 11$ $1 2 3 4 5$ $(1) \stackrel{\text{MEV}}{\longrightarrow} \bigcirc \bigcirc \bigcirc \bigcirc \bigcirc$

To cancel the cycle hold the START/STOP button (5) pressed for more than 5 seconds, then press the ESC key (4). The display will go back to the Home screen.

3 10.8 ALARMS

This page allows you to enter the ALARMS menu .

► Premere key MENU (2),	
► Select with UP-DOWN keys (9-10) ALARMS LIST item then press the SET key (11)	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
 Press the UP-DOWN keys (9-10) to scroll through the alarms list . Active alarms will be identified with ON Either press the ESC key (4) to terminate or do not work for 60 seconds. 	$\begin{array}{c} 6 & \bullet & - \end{array} \\ \hline & HARM LIST \\ \hline & Fror Pr1 \\ \hline & OFF \\ \hline & Fror Pr2 \\ \hline & OFF \\ \hline & Fror Pr2 \\ \hline & OFF \\ \hline & Fror Pr3 \\ \hline & OFF \\ \hline & Fror PD \\ \hline & OFF \\ \hline & Fror PD \\ \hline & OFF \\ \hline & Fror CSd \\ \hline & OFF \\ \hline & - \bullet 10 \\ \hline & - \bullet 11 \\ \hline $

List of alarms which may occur:

ALARM	DESCRIPTION	CAUSE	SOLUTION
Pr1	Cell probe error	 Cell probe fails 	 Replace probe
Pr2	Evaporator probe error	 Evaporator probe fails 	 Replace probe
Pr3	Condenser probe error	• Disabled	Disabled
Pr4	Humidity probe error	Humidity probe is faulty	Replace the probe
АН	Maximum temperature alarm	 Cell probe is faulty Control unit is faulty Cooling system is faulty 	ServiceServiceService
PD	Poup-Down compressor alarm	• Disabled	• Disabled
CSd	Blocked Compressor alarm	• Disabled	• Disabled
СОН	Blocked Compressor alarm	• Disabled	• Disabled
rtc	Internal clock error	 The device has not worked for a long period Control unit is faulty 	 Switch on the device and set the date again Service
CtH	Compressor thermal protector	Compressor overheated	Service
ErC	No compatibility between interface and control modu-	 Firmware of setting - instrument is not compatible 	Service
ErL	No communication between interface and control module	 Interface connection is either incorrect or faulty 	 Check proper connection
PF	Interruption of power supply to the machine	 Power failure may have occurred 	 Press any key to cancel the alarm
id	Open door alarm	The door has been kept open	Close the door
НР	High pressure alarm	High pressure intervened	Clean the condenserCheck fan
LP	Low pressure alarm	Low pressure intervened	Service

TOIS MANUAL DEFROSTING

To start a MANUAL DEFROSTING cycle proceed as follows.

Premere the key MENU (2),	
 Select with the UP-DOWN keys (9-10) the MA- NUAL DEFROSTING item then press the SET key (11) The defrosting cycle will start if the evaporator temperature is lower than the defined value for the defrosting completition, only 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
► The display will go back to the Home screen where the defrost icon relative to the MANUAL DEFROSTING cycle running will appear in the center of the picture display.	

10.10 Detailed description of the icons relative to the Controllers Status

During the implementation of a cycle (either Manual or Automatic) the status of the main controllers shall be displayed by means of icons.

¥X ↓	 White ON : compressor is activated Yellow ON: compressor activation is required OFF : compressor is not active
<u>[</u> <u>}</u>]	 ON : heating is activated OFF: heating is not active
	 ON : humidification is activated OFF : humidification is not active
	 ON : dehumidification is activated OFF : dehumidificazione is not active

Buzzer silencing

Press and release any key when the buzzer is sounding.

Alarms

When an alarm signal occurs a pop-up window opens stating the current alarm code. The buzzer sounds in an intermittent manner until you press any key silencing the buzzer and making the pop-up window disappear.

The icon indicating the current alarm is still present on the screen Δ

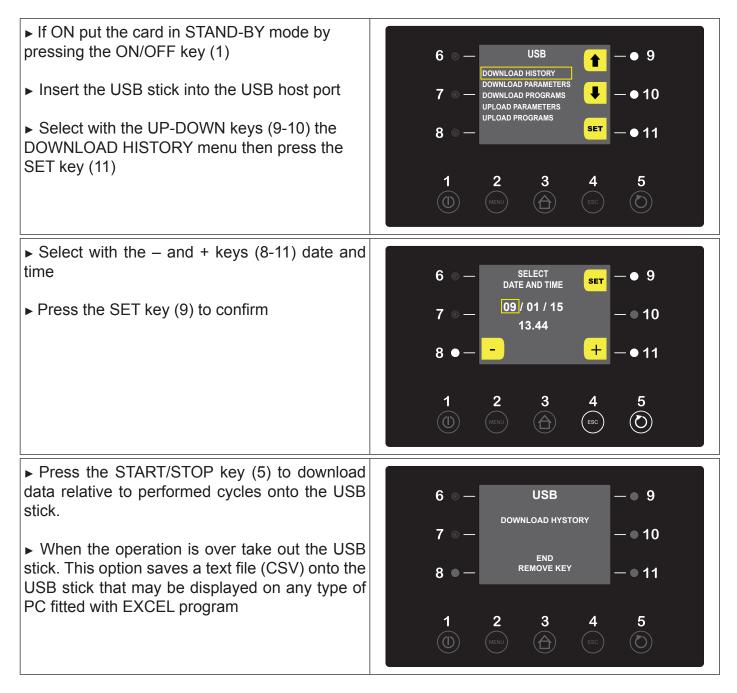

🗿 10.11 USB Host Port

By inserting a USB stick you may have the possibility to carry out the following operations:

- ► Download the data relative to the cycles performed on the USB stick (historical records)
- Download the saved parameters onto the USB stick (service)
- Download the saved programs onto the USB stick (service)
- Upload the parameters contained in the USB stick (service)
- Upload the programs contained in the USB stick (service)

10.12 Download of data relative to the cycles performed on the USB stick (historical records)

It allows to record the data relative to the performed cycles onto the USB stick and view them on any PC by means of Excel computer program.

The download file will be a CSV format, i.e. it can be simply open with a double click by any computer fitted with Excel program.

The recorded files have a sequential number accordingly with the number of times they have been unloaded.

In this way the name of file could change in "log00n00001.csv", "log00n00002.csv", etc.

All collected data will be automatically entered in tabular form on a Excel sheet, separated into columns and rows. You can then obtain tables and graphs (see example) depending on your needs.

CHAPTER 10 NOISE LEVEL

The noise threshold of the retarder-proofer/dough-retarder Refrigerated Room is lower than 70 dB (A).

CHAPTER 11 MATERIALS AND FLUID USED

The materials in contact or which may come into contact with foodstuffs comply with the relevant directives.

The retarder-proofer/dough-retarder Refrigerated Room have been designed and built in such a way that these materials can be cleaned before each use.

The coolants used R404A conform to the relevant provisions of law (see Table 1).

R404A is a fluorinated gas covered by the Kyoto Protocol with a GWP potential of 3300

The symbol indicates that this product must not be treated as household waste.

To prevent potential negative consequences for the environment and human health, make sure that this product is properly disposed of and recycled.

For more information regarding the disposal and recycling of this product, please contact your Distributor, after sale Service, or waste treatment Service.

CHAPTER 13 TRANSPORT AND HANDLING

The transport and handling of the retarder-proofer/dough-retarder Refrigerated Room must only be done while maintaining the vertical position, observing the markings on the packaging.

The manufacturer disclaims any liability for problems resulting from transport performed under conditions other than those specified above.

The accessories of the retarder-proofer/dough-retarder Refrigerated Room are packaged separately and placed inside the unit.

The retarder-proofer/dough-retarder Refrigerated Room it is disassembled and mounted on a wooden base with screws and packaged with polyethylene, carton, crate or boxes.

Regarding the disposal of the packaging it is necessary to refer to current regulations in your country.

The movement of the retarder-proofer/dough-retarder Refrigerated Room shall be performed using a fork lift or pallet trucks equipped with suitable forks (length of at least 2/3 of the unit). The dimensions and masses of the retarder-proofer/dough-retarder Refrigerated Room packed are shown in Table 1.

The limits of stackability and the centre of gravity are indicated on the label of the package.

13.1 Positioning operations

Since the incorrect positioning of the retarder-proofer/dough-retarder Refrigerated Room can cause damage to the same, jeopardizing its proper functioning and cause risks to the personnel, the installer must comply with the following general rules:

- position the retarder-proofer/dough-retarder Refrigerated Room keeping a minimum distance of 3 cm from any wall

- the environment must be sufficiently ventilated
- position the retarder-proofer/dough-retarder Refrigerated Room away from heat sources
- avoid exposure to direct sunlight
- remove the polyethylene, cardboard or wood packaging

Polyethylene is dangerous for children

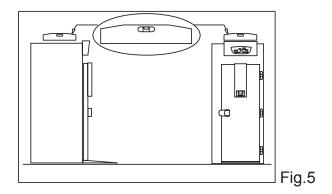

- remove any accessories with external connections

use protective gloves when handling the wooden packaging and the wooden base.

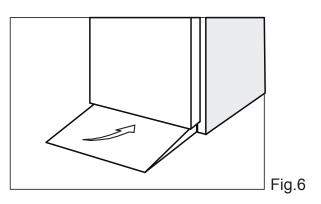

The presence of splinters may cause damage to your hands

- remove the PVC film applied as a protection to the outer surfaces of he retarder-proofer/doughretarder Refrigerated Room

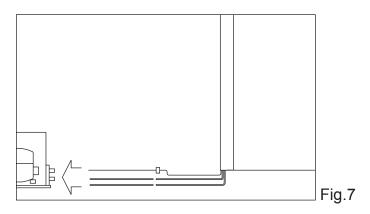

- position the retarder-proofer/dough-retarder Refrigerated Room using a level with possible adjustment of the feet of the metal base (Fig. 5)

- place the access ramp (Fig. 6)

13.2 Retarder-proofer/dough-retarder Refrigerated Room REM (Fig. 7)

- position the retarder-proofer/dough-retarder Refrigerated Room as described above (Fig. 5)

- N.B.: the condensing unit is pre-loaded with refrigerant by the manufacturer

- prepare the two pipes that protrude from the Refrigerated Room for the connection to the respective pipes of the condensing unit

- connect the pipes of the condensing unit to the pipes of the Refrigerated Room

- make the electrical connection of the Refrigerated Room to the condensing unit

CHAPTER 14 ELECTRICAL WIRING AND CONNECTIONS

The electrical system and connection must be carried out by qualified personnel. Before installation, measure the impedance of the network, the impedance value for the connection to the network must not exceed 0.075 ohm.

For safety reasons you must follow these guidelines:

- verify that the sizing of the electrical system is suitable for the power consumption of the Refrigerated Room and that it provides for a differential switch (circuit breaker)

- in case of incompatibility between the outlet and the plug of the Refrigerated Room, replace the outlet with another of a suitable type provided that it is in accordance with regulations

The power cord has the connection type "Y" and it can be replaced exclusively by the manufacturer or authorized technical service

It is essential to correctly connect the Refrigerated Room to an efficient earthing system carried out as specified by the applicable provisions of law.

14.1 Connection to the water supply (retarder-proofer solely)

All models of retarder-proofer/dough retarder Refrigerated Room need to be connected to a water supply to perform the functions of management and control of humidity. The connection to water supply must be made according to the manufacturer's instructions and by professionally qualified personnel. The fitting of 3/4 for the connection to the water supply is located in the condensing unit of the retarder-proofer Refrigerated Room, in the rear, close to the housing of the power supply cable at an height from the ground of cm 190. This unit must only be supplied with cold water, not distilled or demineralized.

The operating pressure should be between 0.1 and 0.5 MPA. Between the water network and the load connection of the equipment 3/4 should be installed a tap to interrupt the passage of water in case of need. In the case the water is hard it is advisable to install a water softener, the presence of solids such as sand can be eliminated by installing a mechanical filter to be inspected and cleaned periodically.

CHAPTER 15 INSTALLATION OPERATIONS

It is important, in order to prevent errors and accidents, to perform a series of checks before starting up the the retarder-proofer/dough retarder Refrigerated Room in order to identify any damage incurred during transport, handling and connection.

Checks to be performed:

- check the integrity of the power cord (it must not have suffered abrasions or cuts)

- check the solidity of the legs, door hinges, shelf supports

- check the integrity of the internal and external parts (pipes, heating elements, fans, electrical components, etc.) and their fixing

- check that the seals of the doors and drawers have not been damaged (cuts or abrasions) and close with an airtight seal

- check the integrity of the pipes and fittings

CHAPTER 16 REINSTALLATION

It is necessary to comply with the following procedure: - disconnect the power cord from the power outlet

the handling should be carried out as described in chapter 13
for a new placement and connection, please refer to par. 13.1
proceed to the possible recovery of the coolant gas in accordance with the regulations in force in your country

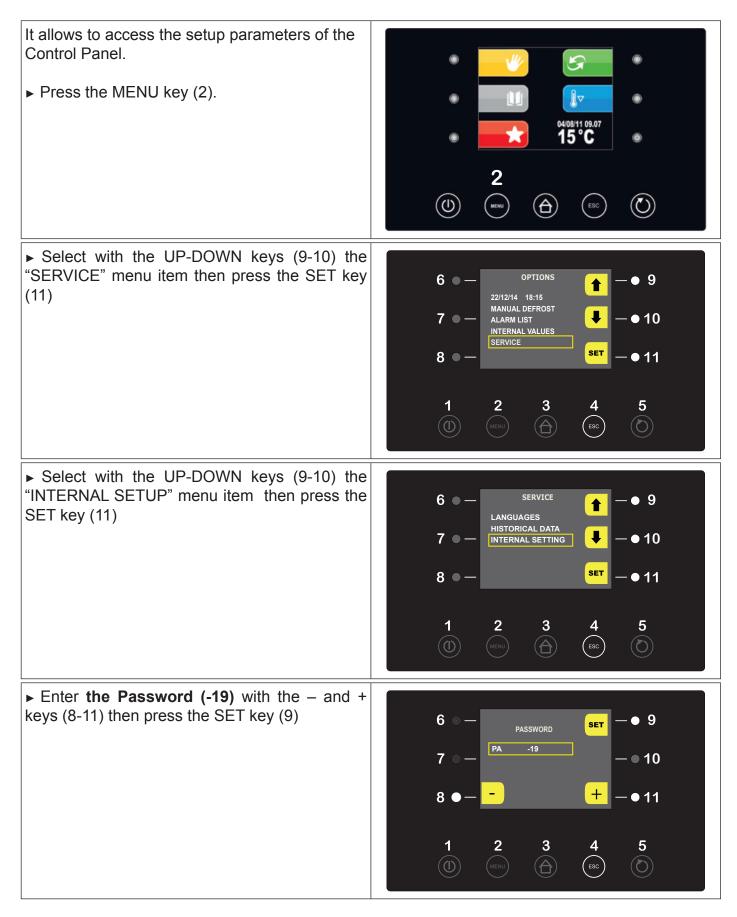

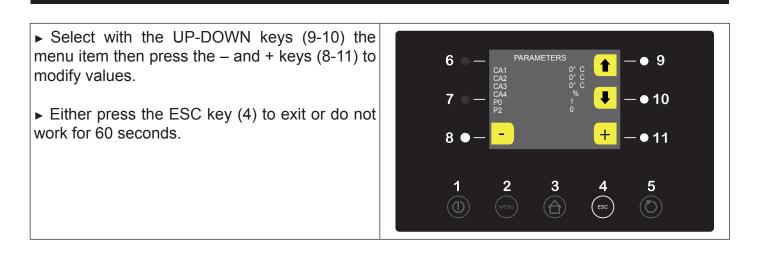

ATTENTION!

INSTRUCTIONS RESERVED SOLELY TO TECHNICAL PERSONNELL

Users are adviced that any work performed by non-technical staff or unauthorized personnel will produce the voiding of the warranty rules.

PARAMETER MODIFICATION DISPLAYING

ALARM LIST DISPLAYING

Proceed as stated at Paragraph 10.8 to display the alarms list.

F15	1	600	sec	0	0	Evaporator fan switching-on time within the F14 cycle time
F16	0	99	°C	40	40	Condenser temperature above which the condenser fan will be switched-on even if the compressor is switched-off
F17	0	240	s	5	5	Delayed switching-off of the condenser fan from the compressor switching-off (active if the condenser probe is disabled, only)
F18	0	240	s	5	5	Delayed evaporator fan switching-on from the closing of the door, i.e. from the deactiva- tion of the micro door input
F19	0	100	%	50	50	Minimum speed of the evaporator fan that can be set
F20	0	100	%	100	100	Maximum speed of the evaporator fan that can be set
F21	0	100	%	100	100	Start-up wind speed of the evaporator fan
F22	1	10	s	10	10	Time cue at the evaporator fan switching-on
F23	0	100	%	0	0	Calibration value of the evaporator fan minimum speed
F24	0	100	%	100	100	Calibration value of the evaporator fan maximum speed
Par.	Min.	Mas.	Unit	Dough	Retarder-Proofer	Digital inputs
iO	0	2		1	1	Effect caused by the door opening, i.e. by the micro door input activation 0 = no effect 1 = the compressor, the evaporator fan and the heating resistors will be switched off, the cell light will be switched on 2 = the evaporator fan and the heating resistors will be switched off . The cell light will be switched on
i1	0	1		1	1	Type of contact of the micro door input 0 = normally-open (active input with closed con- tact) 1 = normally-closed (active input with open contact)
i2	1	120	min	-1	-1	Delayed alarm warning when the door is open (code "id") -1 = the alarm is not reported
i3	0	1		1	1	Effect caused by the activation of the high pressure input 0 = no effect 1 = the compressor and the evaporator fan will be switched off and the condenser fan will be switched on
i4	0	1		1	1	Type of contact of the high pressure input 0 = normally open (active input with closed contact) 1 = normally closed (active input with open contact)
i5	1	240	s	5	5	High pressure delayed alarm warning (code "HP") 1 = the alarm is not reported
i6	0	2		1	1	Effect caused by the activation of the low pressure input 0 = no effect 1 = alarm. The compressor and the evaporator fan will be switched off, 2 = pumpdown management and alarm. During the compressor switching off the intervention of the digital input will switch off the compressor output because of the pumpdown end-of-phase. During the activation of the cooling system, the intervention of the digital input will switch off the compressor and the evaporator fan.
i7	0	1		1	1	Type of low pressure input contact 0 = normally open (open input with closed contact) 1 = normally closed (active input with open contact)
i8	1	240	s	10	10	Low pressure delayed alarm warning (code "LP") 1 = the alarm is not reported
i9	0	240	s	40	40	Low pressure limiter reset time when the compressor is being switched on (if i6 = 2 only)
i10	0	1		0	0	Type of contact of the thermal protector input 0 = normally open (active input with closed contact) 1 = normally closed (active input with open contact)
i11	1	240	s	5	5	Thermal protector delayed alarm warning (code "CtH") 1 = the alarm is not reported
Par.	Min.	Mas.	Unit	Dough	Retarder-Proofer	Digital outputs
u1	0	1		1	1	Utility managed by the K8 output 0 = pump down valve (in this case the u2 parameter will be significant) 1 = evaporator fan (in this case the output will repeat on ON/OFF mode the PWM output status dedicated to the evaporator fan)
u2	0	240	s	10	10	If i6 = 0 or 1: compressor delayed deactivation from the pump down valve switching off (pump down in shutdown, for $u1 = 0$ only) If i6 = 2: Maximum duration of pumpdown in compressor shutdown without the activation of the low pressure input so as to cause the compressor switching off and the pumpdown alarm warning 0 = the alarm is not reported
u3	0	1		1	1	Utility managed by the K4 output0 = dehumidifier /extraction fan (in this case the rU5 and rU6 parameters will be significant) 1 = condenser fan (in this case the F16 and F17 parameters will be significant) PLEASE NOTE : with u3 = 1 the dehumidifier activity is automatically managed by the activation of the cooling system
Par.	Min.	Mas.	Unit	Dough	Retarder-Proofer	Serial communication (serial door RS485 with MODBUS communication protocol)
L1	1	240	min	5	5	Sample time of internal data
LA	1	247		247	247	Device address
Lb	0	3		2	2	baud rate 0 = 2.400 baud 1 = 4.800 baud 2 = 9.600 baud 3 = 19.200 baud
LP	0	2		2	2	Even parity 0 = none (no parity) 1 = odd (odd) 2 = even (parity)
Par.	Min.	Mas.	Unit	Dough	Retarder-Proofer	Others
E8	0	2		0	0	Key lock 0 = disabled 1= manual 2 = automatic after 1 minute of inactivity during a cycle
E9	0	1		0	0	Visualisation of splash screen on restoration of power supply 0 = black screen 1 = splash
E10	0	1		0	0	Display positioning 0 = the device is placed above unit 1 = the device is placed below unit
E11	0	120	S	10	10	Duration of the buzzer signal during the precooling and the end-of-cycle phase
E12	0	1		0	0	
E13	0	1		0	0	Unlock humidifier management with serial control
E14	0	1		1	1	Enable the block phase in case of automatic programs
E15	0	1		0	0	Enable the +24/48/72h function

INTERNAL VALUES DISPLAYING

This page will show you all the internal values. Internal values term refers to the temperature values and the appliance active relays that cannot be modified.

► Press key MENU (2),	$ \begin{array}{c} $
► Select with the UP-DOWN keys (9-10) the "INTERNAL VALUES" item then press the SET key (11)	$\begin{array}{c} 6 & \bullet - & \bullet \\ & 22/12/14 & 18:15 \\ & MANUAL DEFROST \\ ALARM LIST \\ & \bullet \\ & SERVICE \\ \end{array} \begin{array}{c} \bullet \\ \bullet \\ & \bullet \\ \end{array} \begin{array}{c} \bullet \\ \bullet \\ \bullet \\ \end{array} \begin{array}{c} \bullet \\ \bullet \\ \bullet \\ \bullet \\ \bullet \end{array} \begin{array}{c} \bullet \\ \bullet \end{array} \begin{array}{c} \bullet \\ \bullet $
 Press the UP-DOWN keys (9-10) to scroll through the INTERNAL VALUES list Either press the ESC key (4) to exit or do not work for 60 seconds. Values cannot be changed 	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$

Internal values displaying :

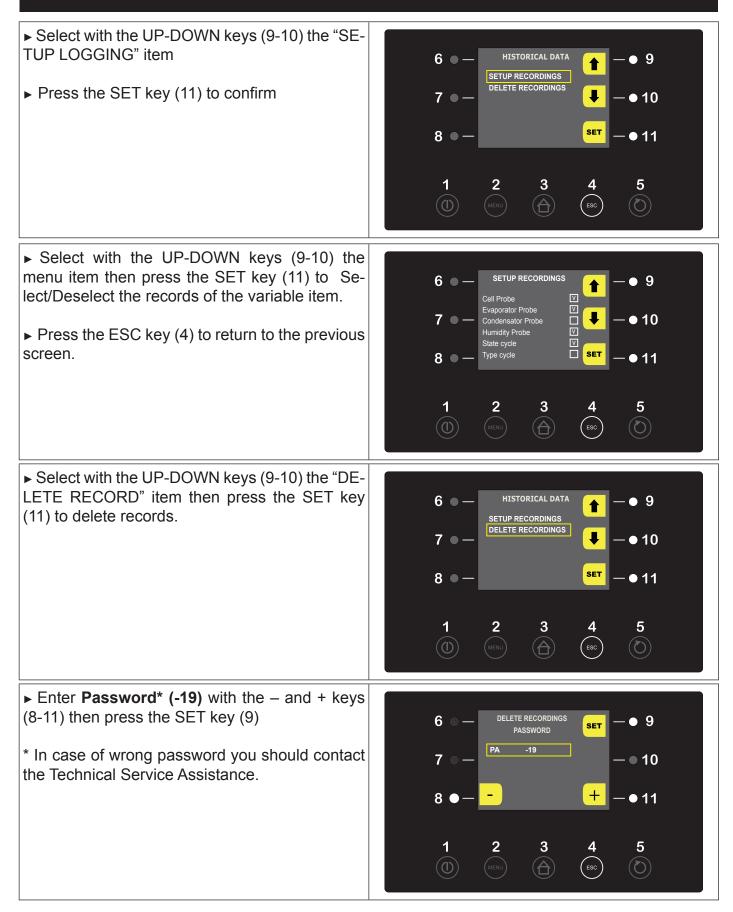

DISPLAYING	DESCRIPTION
Cabinet/cell Temp	Cabinet/cell probe temperature
% Humidity	Cabinet/cell relative humidity
Evap temp	 Evaporator probe temperature
Cond temp	Disabled
Host Port	Digital input
HP	Disabled
Thermal prot	Disabled

Disabled
Compressor digital output
Internal light digital output
Humidifier digital output
Disabled
 Defrosting resistance digital output
 Heating resistances digital output
Disabled
 Evaporator fan digital output

HISTORICAL DATA DISPLAY

It allows you to access to stored data and to select the ones you want either to record or to delete.

► Press key MENU (2),	
► Select with the UP-DOWN keys (9-10) the "SERVICE" menu item then press the SET key (11)	$\begin{array}{c} 6 & \bullet - \\ & \bullet \\ 22/12/14 & 18:15 \\ 7 & \bullet \\ 7 & \bullet \\ 7 & \bullet \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\$
► Select with the UP-DOWN keys (9-10) the "HI- STORY DATA" menu item then press the SET key (11)	$\begin{array}{c} 6 & \bullet - \\ & \bullet \\ 1 \\ 7 & \bullet \\ 7 & \bullet \\ 7 & \bullet \\ 7 & \bullet \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\$

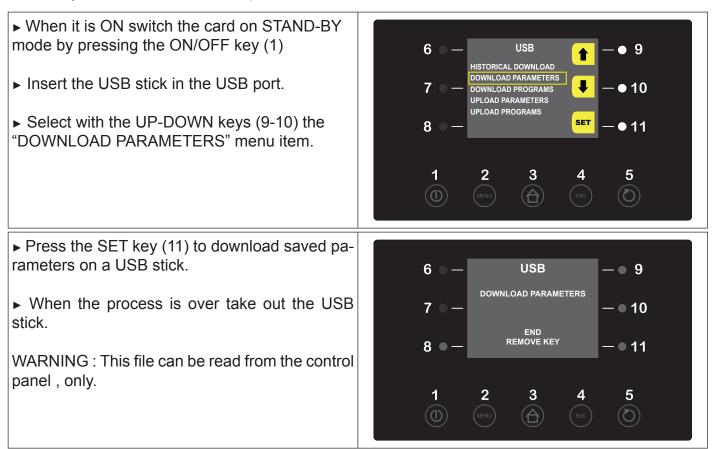

▶ When the operation is over either press the ESC key (4) or do not work for 60 seconds.

NOTE: See what stated at Par. 10.12 to download data referring to effected cycles (History) on a USB stick.

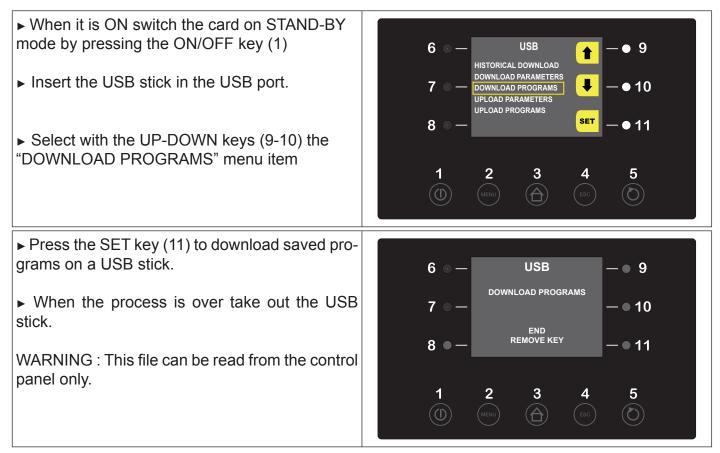

DOWNLOAD OF SAVED PARAMETERS ON A USB STICK

It allows you to save the machine parameters on a USB device

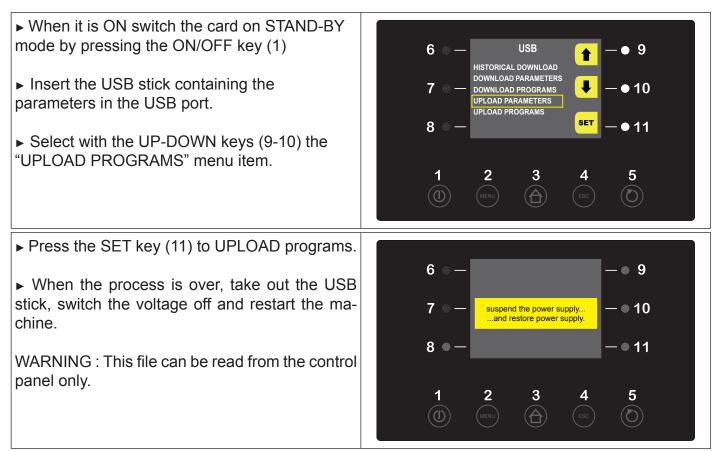

DOWNLOAD OF SAVED PROGRAMS ON A USB STICK

It allows you to save the machine programs on a USB device.

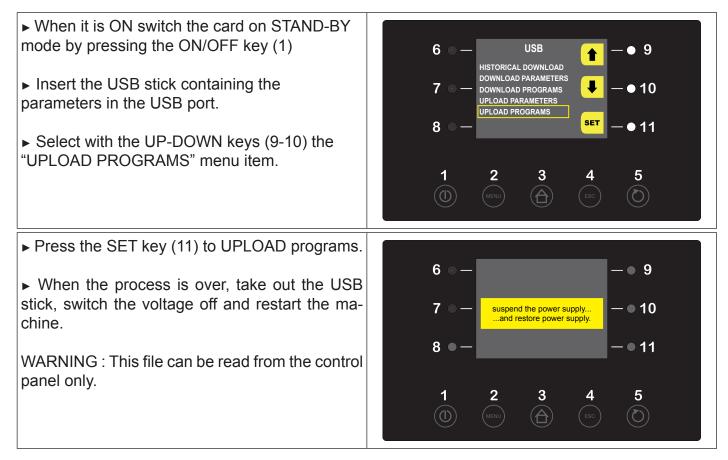

UPLOAD OF SAVED PARAMETERS

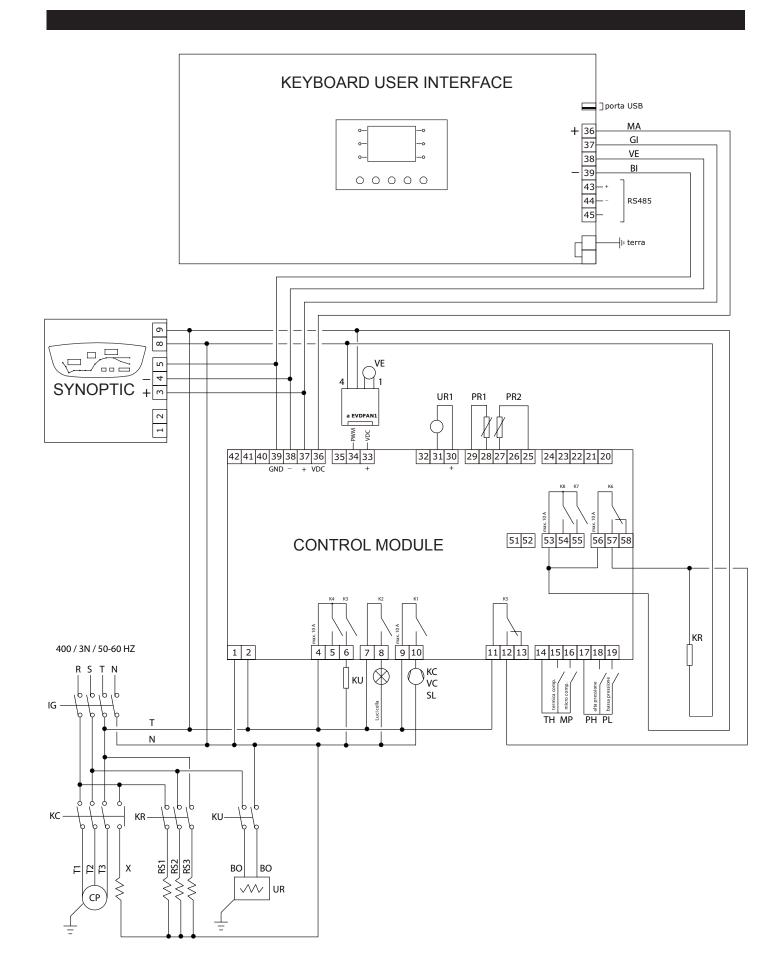

It allows you to store parameters from a USB device to the machine.

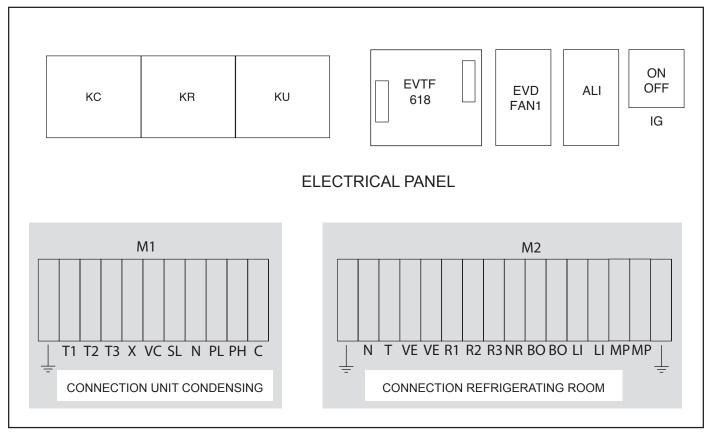

UPLOAD OF SAVED PARAMETERS

It allows you to store parameters from a USB device to the machine.
